

FOI 026 2024 Response

I am carrying out some research for a report, trying to ascertain preparedness for carbon zero in the public sector. I am particularly interested in public sector organisation's understanding of current energy usage. Clarification: Requester would like data for the last year and to note that they do not want energy or water usage.

I would like to know:

a) The number of electric, gas, fuel & water meters the organisation has (billing meters and sub-meters).

Electric (55 meters), Gas (54 meters), Fuel (6 meters) & Water meters (34 meters).

b) The number of those meters that are manually read & recorded.

Approx 10%

c) The number of those meters that are AMR (Automated Meter Reading) meters.

Approx 90% of the fiscal meters – exact number data not recorded.

d) Across how many sites the meters distributed.

43 sites.
